

## Installing and Aiming the Lind Equipment L61

1. Install fixture according to Installation Instructions provided with the fixture. Position the fixture with the arm in a straight line.

2. Place one hand on the light head and the other hand on the flexible arm (see image above for hand placement in relation to reinforced area).

3. Position the fixture using one long continuous curve. Do not position the fixture along the reinforced area as this will not hold a curve.

### Helpful Tips

Springs will stiffen with increased movement and colder weather.

Do not overbend the fixture.

Do not aim using sharp angles at either endpoint.

Aim the fixture and use the mounting bracket to swing the fixture in and out of the way as necessary.
