Benefits of a Total Home Surge Protection System*

- Retrofit or install surge protection during the construction phase and maximize the benefits when you move into your new home.
- Cost of this high value option can be included in your home purchase price, adding as little as \$8.00 to your monthly mortgage payment.
- Controlling your insurance costs by avoiding the risk of claims, disputes and cancellations caused by repeat surge damages.
- Extend equipment life and improve reliability to all electrical equipment.
- Lifetime free replacement warranty on all surge protection equipment.

 **Computer Grade Power for the Whole Home.**

Emotional Risks – Priceless

- Lost data on computer equipment.
- Minimize the cost of repairs & inconvenience of equipment replacement, caused by devastating power surges.
- Increase the security and safety of your family by ensuring the continued reliability of appliances, telephones, computers and security systems when you need them most.
- Peace of mind!

"Computer Grade Power for the Whole Home"

Exposing Your Electronic and Electrical Equipment to Harmful Surges and Spikes

Go Green Double the Life of Your Electronic and Electrical Equipment; Dramatically Reduce Repair and Replacement Costs

Proven Residential and Commercial Results Using Total Protection Solutions® Performance Based Filtering Technology

Residential – "We turned on the breaker feeding the TPS unit and everyone in the room could see it instantly working to clean up the power. Since I have seen this unit working with my own eyes I can say that Total Protection Solutions® approach to overall power quality for the home is the only way to go."

High Tech Manufacturing – "Our site projects the return on investment (ROI) was less than 2 months after completing the installation of the 3 level surge suppression system. This meant that we saved millions of dollars in losses."

Major Hospital System – "In the past, we had installed a few different manufacturers' surge suppression units, and although there was some reduction in lightning damage, there seemed to be no effect on the daily nuisance problems experienced by our sensitive (and very expensive) electronic equipment in the hospital....the results of installing the TPS units include reduced downtime, clearer ultrasound images, no lightning damage whatsoever....Our payback period is less than one year."

Municipal/Government – "The result was lower maintenance costs. We feel this technology will allow us to achieve significant short and long term savings, increase reliability and longevity of all our electrical & electronic equipment throughout the county."

Retail – "We had more electrical problems at that store than any other. Not only was it a cost savings on maintenance, but the down time and loss of sales were virtually eliminated."
